

New Super Smooth Throttle Valves for Amal Mark 2 Concentric Carburetors

In response to customer demands, Amal has introduced to its range, additional new heavier super smooth throttle valves. These are for Mark 2 carburetors, 2600, 2900 and 2000 series, covering bore sizes from 22 mm to 40 mm.

They are interchangeable with existing Mark 2 standard throttle valves and are heavier to improve the speed of response when closing the throttle.

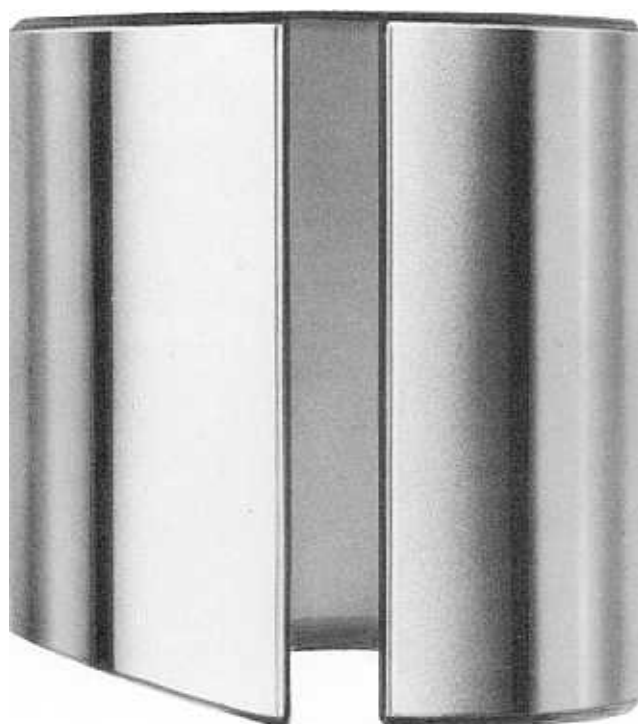

These valves are precision made in special brass with polished hard chrome surfaces. This is for smoother operation and increased wear resistance to harsh environments such as occur in Speedway, Moto-Cross and other competition applications.

When ordering, please use the following part numbers:

2622/170 – For 22–26 mm carburetor bore sizes.

2928/170 – For 28–34 mm carburetor bore sizes.

2036/170 – For 36–40 mm carburetor bore sizes.
